Annual certificate updating

All CR certificates are updated annually in order to ensure that the packaging is up to date and to make it possible to make additions and alterations. If alterations take place or you are planning alterations to the certified bottles or other containers /cans, drums, etc., we would like to be informed as quickly as possible. Contact us for a review. When alterations are made we need the following to be able to continue to maintain approved packaging:

- Updated drawings
- New raw material specification
- 10 bottles/containers

General information relating to child-resistant packaging

In order for a packaging to be deemed child-resistant, it must be tested, assessed and certified in accordance with the international ISO 8317 standard by an accredited test institute. It is always the complete packaging, in combination, that must be approved, not just the cap or closure.

There is nothing that regulates who should hold this certificate for child-resistant packaging, but we have chosen to include this in our offer – to offer “packaging that makes life easier!”

Over and above the certificate, the party responsible for the final product must ensure that the child-resistant function is maintained throughout the whole of the life-cycle of the packaging (SS-EN-ISO 8317, point 4.2). As the content and requirements for the product can vary, it is not possible for us to guarantee this.

Contact us and will be only too pleased to provide you with more information.

A wider range?

Do you have more bottles or other containers (cans, drums, etc.) that are suitable for our child-resistant range of caps and closures? Contact us for an assessment to include them in your appendix.

We have the following CR certificates:

- DLM 29
- P28
- PCO28
- P32
- P40
- 40UN
